

Organization of the Central Research Institute of Electric Power Industry

Central Research Institute of Electric Power Industry

Annual Research Report Fiscal Year **2012**

Contents

1. Outline of Research Activities 1

CRIEPI's R&D Portfolio in FY2012 (Pillars of research and eight research laboratories)

2. Major Research Results 5

Priority Subjects/Priority Subjects with Limited Terms

Establishment of Optimal Risk Management

Policy toward Sustainable Structures and Regulations for Electric Utilities	6
Analysis for Energy Saving and Environmental Policy - A Harmonized View of Economic Rationality and Energy Security	8
Scientifically and Economically Rational Scenarios to Reduce CO ₂ Emissions	10
Safety Assessment of LWR Systems	12
Improvement of Safety Assessment Technologies on External Natural Hazards for Nuclear Facilities	14
Assessment of Radioactive Material Diffusion in the Environment and its Remediation Effectiveness	16
Development of Fire Modeling Methodology for Nuclear Power Plant Applications	18
Quantitative Evaluation of Low-Dose Radiation Risk and its Reflection on Radiation Protection	20
Development and Systematization of Long-Term Safety Assessments	22
Development of Long-Term Storage Management Technologies for Spent Fuel	24
Development of a Prediction Method for Meteorological and Climatic Impact on Power Facilities	26
Establishment of Protective Measure Technologies against Damages of Overhead Transmission and Distribution Facilities Caused by Wind and Snow	28
Development of Lightning Risk Management Schemes	30

Further Improvement of Facility Operations and Maintenance Technologies

Integrity Assessment of Aged LWRs	32
Development of Life Assessment Technology for High Temperature Structural Components of High Chromium Steels	34
Development of Techniques for Comprehensive Impact Assessment of Thermal Power on Atmospheric Environment	36
Development of Technologies for Supporting Construction and Maintenance of Power Plants from the Viewpoint of Biodiversity Conservation	38
Synthesis System of Numerical Analysis for the Currents and Sediments in Rivers and Reservoirs	40
Demonstration of a Simplified Treatment Technique for PCB Contaminated Transformers	42
Development of a Maintenance Scheme for Aged Power Transmission and Distribution Facilities	44
Development of Soundness Assessment Techniques for Aged Overhead Transmission Steel Towers	46

Development of a Supply/Demand Infrastructure for Next-Generation Electric Power

Improvement of Operation and Control Technologies to Diversify Fuel Types for Pulverized Coal-Fired Power Plants	48
Development of Upgrading Technology for Low-Grade Energy Resources	50
Development of Enhanced IGCC and Low Carbon Technologies	52
Assessment of System Security with High Penetration of Photovoltaics	54
Development of a Next-Generation Coordination System for Power Demand and Supply	56

Next-Generation Communications Network Systems	58
Evaluation of the Feasibility of Demand Response Suitable for Japan	60
Development and Evaluation of Advanced Heat Pumps	62
Development of High-Performance SiC Power Semiconductors	64
Establishment of Evaluation Technologies for High Performance Secondary Batteries	66
Evaluation of Energy Efficiency in Commercial Kitchens	68
Acceleration of Electrification with Electric Vehicles and Secondary Battery Systems	70
Basic Technology Subjects	
Socio-Economic Research Center	72
System Engineering Research Laboratory	74
Nuclear Technology Research Laboratory	76
Civil Engineering Research Laboratory	78
Environmental Science Research Laboratory	80
Electric Power Engineering Research Laboratory	82
Energy Engineering Research Laboratory	84
Materials Science Research Laboratory	86
3. Major New Research Facilities	89
4. Activities	95
